

Syntaxonomy of Chilean Vegetation

M. Alvarez and F. Luebert

Alvarez M. & Luebert F. (2022). Chilean vegetation in the context of the Braun-Blanquet approach and a comparison with EcoVeg formations. Vegetation Classification and Survey. doi: 10.3897/VCS.72194

Hierarchical relationships between syntaxa recorded for the Chilean vegetation. Syntaxonomic ranks are recognized by their indentation and by their suffixes, as stated in the Art. 11 of the **International Code of Phytosociological Nomenclature** (see [Theurillat et al., 2020](#)). The names of the classes (highest syntaxonomic ranks) are formatted in bold fonts.

Synonyms are placed below their respective accepted names and are indicated by a leading equal symbol. Besides every accepted name a link to the respective syntaxonomic view is added after the abbreviation sec. (*secundum*), which corresponds to the publication used as reference defining the circumscriptions of the respective syntaxonomic concepts. These terms are applied in analogous to plant taxonomy (see [Alvarez & Luebert, 2018](#) for a glossary).
